

Press release – For immediate release

Directory Submissions Simplified with Website Submitter 1.7

German software engineering firm **FastLink2** is pleased to introduce **Website Submitter 1.7**, the latest version of the company's powerful **directory submission software** application. Website Submitter has an excellent reputation for helping webmasters throughout the world, master the art of keeping their directory submissions current with a minimal investment of time.

Website Submitter 1.7 is the latest directory submission software in the quest for increasing website traffic and page rank. As the competition for search engine ranking and traffic becomes more fierce, it is important for website owners to use every available resource to differentiate their websites from those of their competitors.

One of the most powerful ways to increase website traffic and boost search engine ranking is to create backlinks via listings in online directories. However, the process of manually locating directories and keeping up with posting directory submissions is very time consuming.

Website Submitter 1.7 has been completely updated and is designed to simplify the process of keeping up with directory submission. Users don't have to search for the latest directories, and they don't have to enter the same information about their websites to each directory.

With Website Submitter, users enter information about their websites one time. The software then takes care of submitting the website to 3000 selected directories available. Minimal user input may be required for such tasks as entering captcha phrases and selecting sub-categories.

Website Submitter is **the only SEO safe directory submission software** application. Because the program is designed to be compliant with the posting rules of each directory, users don't have to worry about being penalized for using a semi-automatic directory submission tool.

The program has been completely updated with the latest directories, and is now compatible with Windows Vista. Frequent direct from interface updates will enable users to keep up with adding their websites to additional directories as they become available.

Website Submitter 1.7 is a product of German software engineering firm **FastLink2**. It can be purchased for only \$47 with 2 years free updates.
